Velocity chart
How well the team is managed

- Rising velocity

  - Not necessarily a sign for going-faster

  - Devalue them under external pressures

  - Velocity is a measurement not an objective

  - DO NOT put pressure on the thing you're measuring

- Falling velocity

  - A red flag about the code quality

- The golden story

  - Avoid inflation in story estimating

Small Releases

- Release as often as possible

- Continuous delivery

  - release after every change

  - release => software is technical deployable

- Source code control used to be a challenge

  - Git gives a good solution
