Acceptance Tests - 3
QA's role

- Requirement specifier

  - Work with business to define acceptance tests at the **front end** of the project

- Automate tests producer

  - Developers run them to determine if the system is deployable

- Advantages of new roles

  - Avoid losing the tests at the end

  - Deal with the QA disease: defects are considered as a good thing

Whole Team
On-Site Customer

- All about 'co-location'

  - minimize the physical distance of all players

- A business practice, and not a team practice
